**TO WHOMSOEVER IT MAY CONCERN**

We at A3 Technocraft have been utilizing the optimized Aerobic Bio-culture REVY - AER, along with its nutritional formulations REVY CMB & CMB Plus, for the past three years to commission aeration units of Sewage Treatment Plants (STPs) and Effluent Treatment Plants (ETPs). Our experience in using these products from REVY has been exceptional.

REVY - AER has significantly improved the efficiency of our treatment processes of our waste water treatments units. The bio-culture is robust and has consistently demonstrated rapid adaptation to our systems. This has resulted in quicker start-up times and enhanced performance of our aeration units. The efficiency gains have allowed us to meet and exceed our treatment objectives, ensuring compliance with stringent environmental regulations. The use of REVY CMB & CMB Plus has provided the essential nutrients required for the optimal growth and activity of the bio-culture. This has resulted in a stable and resilient microbial community, capable of handling varying load conditions with ease. The formulations have effectively minimized downtime and maintained high levels of biological activity, even during peak operational demands.

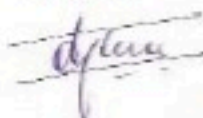

By integrating REVY - AER and its nutritional formulations into our treatment processes, we have observed a substantial reduction in operational costs. The quicker commissioning times have reduced the overall energy consumption and chemical usage, leading to significant cost savings. Additionally, the reliability of the bio-culture has minimized the need for frequent interventions and maintenance.

A3 Technocraft is committed to sustainable practices and the use of these advanced bio-culture and nutritional formulations has aligned perfectly with our environmental goals. The improved treatment efficiency has resulted in lower pollutant levels in the discharged effluent, contributing to a healthier ecosystem and compliance with environmental standards.

The support from REVY team has been exemplary. Their technical expertise and responsiveness have ensured that we receive timely assistance and guidance whenever required. This partnership has been instrumental in the seamless integration of these products into our operations.

We highly recommend these products to any organization seeking to enhance the performance and efficiency of their STP and ETP aeration units.

Sincerely,

Tarun Chauhan
