To Whomsoever It May Concern

We sincerely appreciate the valuable support extended by REVY Environmental Solutions Pvt Ltd in commissioning, operating and maintaining our decentralized food and kitchen waste-based biogas plant. Their continued long-distance guidance during challenging times ensured proper commissioning and smooth functioning.

REVV's products –Biomass Growth Enhancement Formulations (BGEFs) – proved instrumental in building and sustaining a highly active microbial community in these bio-digesters. Even during periods when food waste supply was inconsistent, their formulations helped maintain reactor health and performance. Their timely advice on dosage requirements and troubleshooting operational challenges was immensely valuable for our site team.

Thanks to REVV's reliable products and technical expertise, we were able to begin the waste processing from the very first week of commissioning. Their products further helped us ramp up the feed load systematically and generate optimized volumes of biogas as expected. By the end of the first month, the site kitchen was running entirely on the renewable energy produced from biogas.

The dedication and professionalism of the REVV team, coupled with the quality and effectiveness of their products, have helped us achieve consistent results in energy recovery and waste treatment. We look forward to further strengthening our collaboration with REVV for scaling and replicating such sustainable solutions across more of our locations.
